## Integrated Solar Thermal and Hydronic Systems for True System Efficiency and Value

Complete solar systems and components in stock for quick delivery in California and Nevada.

STS fully integrated high efficiency gas fired and solar hot water systems provide the best value available for those clients seeking cost

competitive combinations of true high efficiency and solar thermal using only quality, proven components. All our systems are modular by design, providing easy installation and proven, repeatable performance.

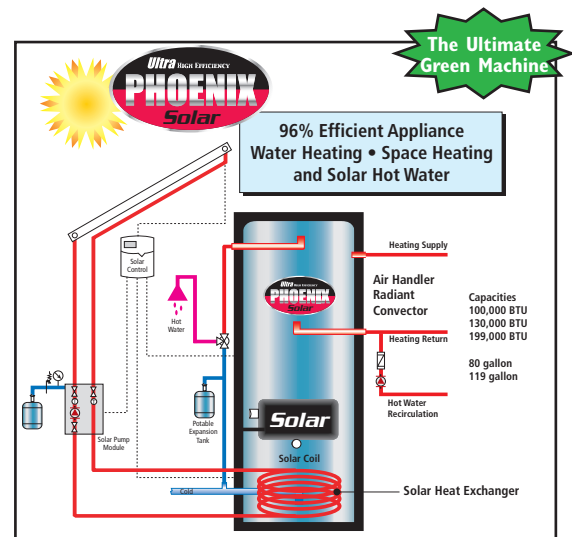

For more information on Solar Thermal Systems visit: <http://www.stssolar.com>

## A 96% gas fired water heating, space heating and solar heating appliance

Phoenix Solar combines the superb features of the Phoenix 96% modulating stainless steel combi water heater with solar thermal...all in one SRCC OG300 performance certified appliance! This merging of existing technologies not only provides superb energy performance but excellent value by eliminating redundant components, making installation easier and saving space. Tremendous Title 24 credit in residential new construction and THE best value for commercial solar water heating systems.

## Munchkin Solar

Integrating solar hot water with an efficient Munchkin hydronic heating system has never been easier and more cost effective. By eliminating duplicate parts all components are included in one OG300 solar performance certified system that provides solar domestic hot water and 92% efficient hot water backup in one package! We have all the components and know how, at a great price!

**Munchkin Solar**

[www.stssolar.com/pages/STS\\_Munchkin.html](http://www.stssolar.com/pages/STS_Munchkin.html)

The single tank Munchkin Solar System saves space and installation costs using a single tank for solar and conventional hot water.

## STS Solar Hot Water

STS is a prime supplier of very competitive solar tanks (Heat Transfer Products), circulators and accessories (Taco) and collectors for closed loop (our preference), drain back and recirculation systems. Several of our residential solar systems are SRCC OG300 certified. Our commercial department has all the components and know how for larger scale commercial solar hot water systems.
